

Environmental Policy

We are committed to preventing pollution and complying with all relevant legislation, regulations and other environmental requirements. We will regularly assess the environmental impact of our activities, products and services, and take steps to continuously improve our environmental performance.

It is our policy to:

Minimize the use of energy, water, and natural resources.

Minimize waste through prevention, reuse, and recycling wherever possible.

Dispose of waste safely and legally.

Avoid the use of hazardous materials, whenever possible.

Work with environmentally responsible suppliers.

Prevent environmental damage and minimize nuisance factors such as noise and air pollution.

We will define objectives, goals and actions for environmental improvement that are related to this policy and to our significant environmental aspects. We will regularly evaluate progress.

We are committed to providing relevant environmental training and promoting environmental awareness among employees and, where appropriate, suppliers, as well as communicating our environmental performance.

We will implement processes to prevent environmental non-conformities and to ensure that we are prepared to deal with potential environmental emergencies. This policy will be reviewed and updated regularly to take into account organizational priorities and changes, environmental legislation, and best practices.
